

Using Magnet AXIOM to Identify Artifacts for eDiscovery

How RVM Enterprises Uses AXIOM to Reveal and Report Evidence to Stakeholders

THE CHALLENGE

The eDiscovery process tends to uncover massive amounts of data, even within a given timeframe or targeting particular keywords. The digital forensic examiners who support the attorneys involved in litigation need to be able to assess the evidence for relevance, quickly identifying artifacts and sources that may be of interest.

This process is only as effective as tools that can keep up technology's rapid evolution. As law firms' clients adopt new ways of doing business and day-to-day work, forensic examiners need three things:

- To be able to identify all relevant information from all possible data sources, including encrypted devices and cloud services.
- A way to narrow the information down and validate their efforts as they review the evidence more deeply.
- The ability to present their findings in a clear, understandable manner to non-technical stakeholders.

It is critical to act and respond to new developments in this field, and Magnet AXIOM is a product that is reliably in the forefront of identifying and cataloging the latest information. AXIOM is a good fast tool for quick initial overview of generally relevant artifacts. It is helpful for quick information delivery with minimal human time.”

—Evan Fuest, Computer Forensic Examiner, RVM Enterprises Inc.

COMPANY OVERVIEW

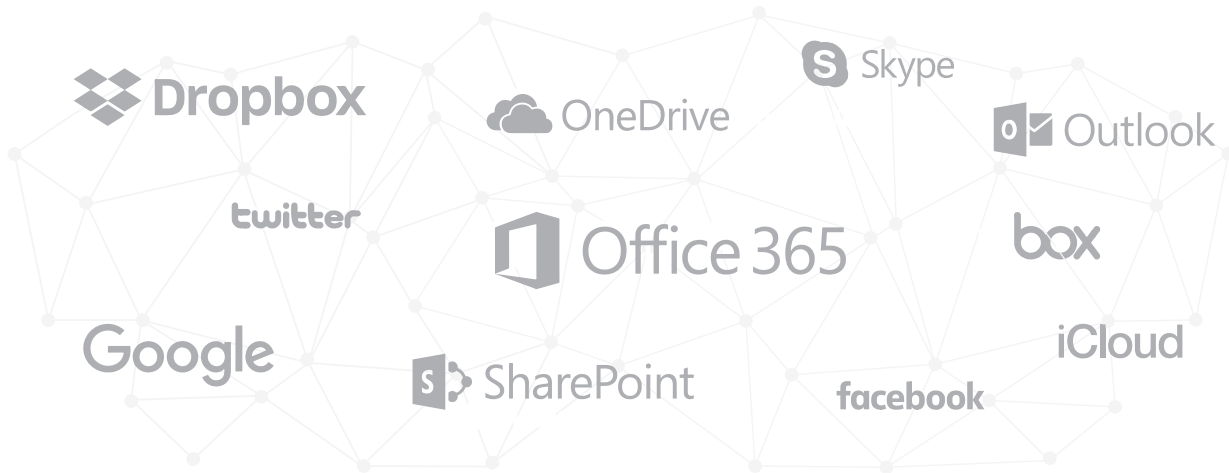

RVM Enterprises Inc. provides eDiscovery and consulting services to global corporations and US law firms across industries and in both the private and public sectors. Its broad range of services include internal investigations and litigation readiness, forensic data collection, and advanced data analytics on cases involving intellectual property and trade secret theft, fraud, employee misconduct, misuse of corporate assets, and harassment and abuse.

HOW AXIOM HELPS

AXIOM is vital to eDiscovery and litigation support because of its responsiveness to rapid technological changes, particularly the sheer number of artifacts it identifies, acquires, and analyzes. Updated on an ongoing basis, these artifacts are as diverse as cloud-based Microsoft® Office® 365 accounts, messaging apps like Skype for Business and Slack, Windows® OS, and other standard artifacts—which can all be combined in a single case.

The ability to find the important evidence within these artifacts—and the capacity to present case findings to stakeholders—is what sets AXIOM apart. Clear reports that offer the most important details about identities, accounts, browser histories, mapped network shares, and other artifacts can help reduce inevitable delays so that stakeholders can focus on other aspects of litigation. AXIOM's easy-to-read, understandable reports help to offset many challenges that can arise during litigation support, such as uncooperative custodians.
