

Reducing Time and Effort on Demanding Caseloads

Magnet AXIOM's Versatile Timelines and Reporting Help Examiners Keep Pace

THE CHALLENGE

Because of the wide swath of cases and the time sensitivity associated with many insider threat, intrusion and incident response, and employee misconduct investigations, one of Risk Diversion's biggest challenges is building effective timelines across multiple data sources, including computer, cloud and/or mobile.

COMPANY OVERVIEW

Risk Diversion, a small South Africa-based business, specializes in a wide range of investigative services and forensic examination services on computers, mobile devices, and the cloud found to be salient to a wide range of crimes and offenses. Insider threats, intrusions and incident response, intellectual property and trade secret theft, fraud, and employee misconduct all fall under Risk Diversion's purview. Even child exploitation sometimes becomes part of the company's caseload.

“ Using AXIOM's timeline view on Windows EVYX files, we were able to determine indicators of compromise within hours rather than days. AXIOM is the industry leader in digital forensics, a single source solution for mobile and computer forensics artifacts and unrivalled in Internet-based artifacts also.”

— Peter Fryer, CEO, Risk Diversion

HOW AXIOM HELPS

Using AXIOM, examiners at Risk Diversion find important email, Google Suite cloud services, and messaging (Skype for Business, Slack, etc.) artifacts faster. This variety of data sources makes AXIOM's ability to retrieve data from the cloud using Microsoft® Office® 365 administrative credentials—and to combine computer, cloud and/or mobile examinations into one case—very important. Equally important is AXIOM Cloud's ability to preserve metadata and collect audit logs, enabling investigators to verify when content was created, modified, and downloaded.

Also important: the ability to visually represent the links between evidence using AXIOM Connections. Being able to trace the movement of a file from cloud to computer or across multiple images can help to establish timelines, and to demonstrate the intent behind suspicious activity.
