

# Scalable, Flexible Digital Forensics for Litigation Support

How Professional Services Firms Use Magnet AXIOM to Identify and Tag Copious Evidence

## THE CHALLENGE

Among these firms' key challenges are the ability to obtain data from encrypted machines/devices, as well as cloud services using administrative credentials. Access to these and other data sources may make all the difference in being able to demonstrate malicious intent vs. inadvertent access through the effective use of timelines and other tools.

Because they frequently operate globally, these firms also have to be able to perform remote acquisitions, scaling for surge teams and customizing solutions for unique deployments. Forensic examiners need to be able to preview the hard drive or other storage media to be analyzed, identifying key pieces of evidence within artifacts such as email, documents from Google Suite and Microsoft® Office® 365, and messaging such as Skype for Business and Slack.

## COMPANY OVERVIEW

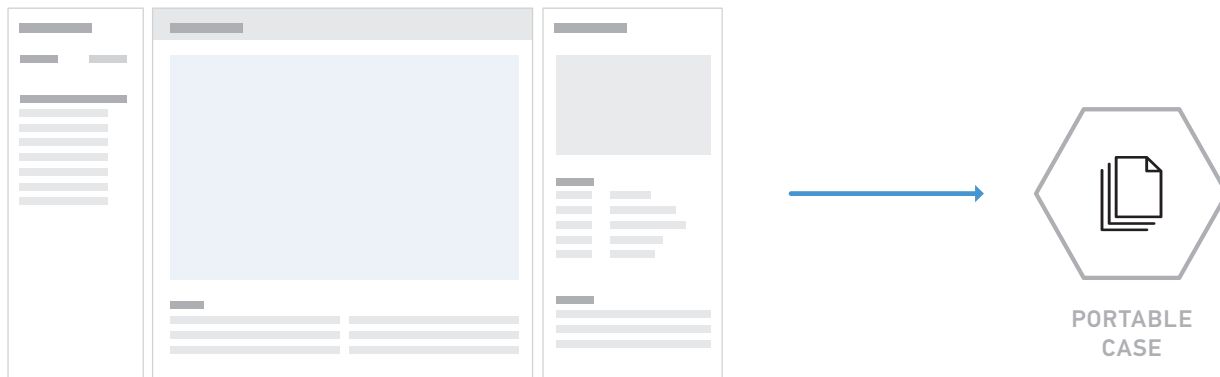

Professional digital forensics and litigation support services firms often need to be versed in complex forensic issues to be able to effectively assist their global clients. They may help clients to assess governance, risk and compliance (GRC); investigate fraud, money laundering, bribery and corruption; and even help to uncover terrorism financing, tax evasion, and anti-trust activities. These firms have to be able to process data in compliance with each jurisdiction's local data protection and other legal requirements, and to consult clients in same.

“AXIOM is the best forensic tool on the market. It is easy to use, thorough in its processing and exceptional in its reporting. I used it in a matter involving a significant amount of data in an arbitration where identifying and tagging many types of emails was necessary. AXIOM works flawlessly.”

— William Odom, Computer Forensic Examiner

## HOW AXIOM HELPS

AXIOM has enabled these services teams to find important evidence faster, easily recovering unknown artifacts or those typically difficult to find from otherwise unsupported mobile apps, and finding more evidence from deleted or unallocated space. In addition, AXIOM's flexible exporting and reporting options help present case findings to key client stakeholders in a way that's easy for them to understand, including the visual representation of evidence using AXIOM Connections.
