

# MAGNET AXIOM CYBER™

A COMPLETE DIGITAL FORENSICS PLATFORM FOR FINANCIAL SERVICES

It's not a question of if a cyberattack will occur, but when. Cybersecurity and how to react to incidents are the top concerns for the majority of Financial Services leaders. And rightfully so, according to The Boston Consulting Group (BCG) the Financial Services industry is the most attacked industry in the world.

Financial Services organizations are being forced to change and adapt. There is pressure to meet new regulations, battle new competitors, and introduce new technology to achieve higher levels of customer satisfaction while reducing costs. However the biggest change that Financial Services must make is how they respond to cybersecurity incidents.

Financial Services need a forensics solution that will help them easily identify how cyberattacks occurred so they can quickly meet regulatory compliance and remediate the effects of incidents as comprehensively as possible.

# MAGNET AXIOM CYBER ENABLES COMPREHENSIVE AND SIMPLIFIED FORENSICS INVESTIGATIONS

AXIOM Cyber is a complete digital forensics platform capable of performing remote collections of target endpoints as well as analyzing evidence from all your data sources including computer, mobile, and cloud-based services.

## Reduce Costs

The number of specialized tools or point solutions that Cybersecurity and Forensics teams have at their disposal can be overwhelming, inefficient, and costly. Magnet AXIOM Cyber is a cost-effective, complete forensics data acquisition and analysis platform including on-demand point-to-point remote collection of target endpoints.

## Meet Regulatory Compliance

Regulations from FINRA or GDPR dictate that once a data breach is known it must be reported to authorities and the nature of the breach be documented, among other things. AXIOM Cyber's artifacts-first approach makes it easy to get a quick and comprehensive view of all the data to quickly and fully report on security incidents according to regulatory requirements.

## Be Prepared for the Future

As many Financial Services are looking to the cloud as a way to reduce costs, gain insight into their data, and provide superior customer service, it's imperative to invest in solutions that will support the cloud. AXIOM Cyber can acquire data from cloud storage services like AWS or Azure. Use Admin credentials to acquire from Office 365 and easily analyze evidence from cloud-based communication apps like Slack or Teams.

## Minimize the Impacts of Insider Threats

Unfortunately Insider Threats in the form of fraud, data exfiltration, or IP theft are all too common for Financial Services. Speed of response is critical to minimize the detrimental effects of attacks from malicious insiders. AXIOM Cyber dramatically reduces the time taken to discover insight and evidence with Analytics and AI-based tools like Timeline, Connections, and Magnet.AI.

## SEE AXIOM CYBER IN ACTION FOR YOURSELF

If you'd like to learn more about Magnet AXIOM Cyber and how it can help you simplify your remote forensic investigations, visit [magnetaxiomcyber.com](https://magnetaxiomcyber.com). While you're there, you can learn more about the product, request an in-depth personal demo from an AXIOM Cyber expert, and request a free trial version.
