

MAGNET IGNITE

Quickly understand your next steps with fast remote scans of endpoints

As a Forensic Service Provider, your clients look to you when they need to know whether a full forensic analysis is needed on an endpoint. Magnet IGNITE will perform fast, remote scans and initial analysis of those endpoints.

- Provide your clients with fast, remote scans of endpoints to know if a full forensic acquisition is needed.
- Eliminate travel and shipping costs with a secure cloud-based tool accessible from a web browser.
- Reduce downtime by creating one agent to run on multiple endpoints at the same time.
- Perform an initial analysis of artifacts and files and apply keyword searches and time filters.
- Easily share findings with clients or colleagues using built in web review tools.

How Magnet IGNITE Helps

Quickly determine if data has been exfiltrated from an endpoint

Know whether outbound employees have taken valuable IP with them

Identify when asset misuse or policy violation has happened

Triage endpoints to find potentially malicious activity

Proceed with insight gathered from fast remote scans of endpoints

Quickly uncover the most common indicator of data exfiltration and suspicious activity with Magnet IGNITE

- Internet history and activity
- Cloud storage and personal email websites visited
- Web search history
- Installed apps and programs
- Recently accessed files and folders
- USB device connection history
